

## Assembly instructions for Agility Soft Tires

The agility tires is one of these obstacles where the dog has to jump through a hoop.

The hoop is typically made of a light but sturdy material and is arranged in a circular shape. The size of the hoop can vary depending on the dog and training level. In competition, the dogs have to jump through the tires without touching or damaging it.

The task for the dog is to jump through the hoop at the right speed and with the right technique to save time and avoid mistakes.

The handlers give the dog the necessary cues through their commands and body posture to jump through the hoop correctly.

### You will receive 1 package:

Metal base, various parts

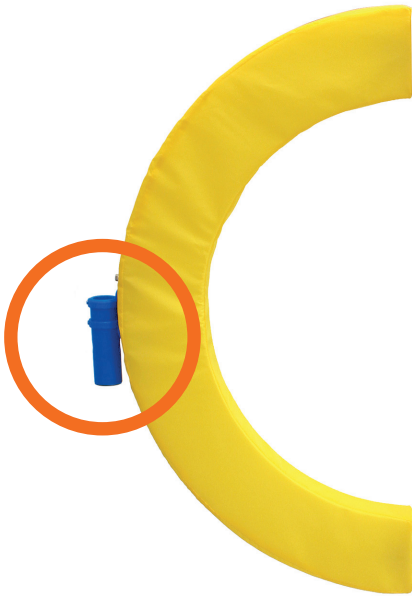

Various small parts, screws, Allen keys, etc.

2 x ring arches

## Tip: The construction is easier in a team

**1.** Place the metal base frame on the floor and first screw the two outriggers to the base rod. Then screw the two side rods onto the thread.

**2.** Screw the 2 blue connecting parts onto each half of the tire.

**3.** Place the 2 grey clamps on the side bars and secure them at the correct height.

**4.** Then put the two half tires on the pole.

The Agility Soft tire is now fully assembled and can be used anywhere, on grass, hard courts or even in the hall.
